USAF Declass/Release Instructions On File

2 November 1956

MEMORANDUM FOR CHAIRMAN, UTILIZATION ADVISORY BOARD

SUBJECT: (Secret) Use of Talent Materials in the Production of Air Facility Publications

1. The Director of Intelligence, USAF, proposes to utilize information derived from TALENT materials in the production of standard air facilities intelligence under the provision of paragraph 3.b. of "Utilization Criteria for TALENT Photography" (SAPC-6187, dated 22 May 1956).
2. Analysis and integration of TALENT information will be done by a group of TALENT cleared analysts assigned to the Special Study Panel authorized by Directorate of Intelligence, Deputy Director for Estimates, Policy and Management Memorandum No. 40-33, dated 21 March 1956.
3. This panel, which has been operating for nine months, is an established and accepted authority for the production of air facility publications which contain similar sensitive intelligence. The air facility sheets contain no specific reference to source and always result from a great variety of sources, each contributing portions of the completed presentation. The techniques employed and the data presented from TALENT material are identical and in no way distinguishable from non-sensitive and in most cases non-photographic sources. It is current practice to revise air facility sheets periodically. The revised sheet contains all the changes which were made known to the USAF since the last revision; hence even major corrections in substantial numbers would not attract attention.
4. The integration of TALENT information in the production of air facilities sheets by the Special Study Panel will be accomplished in precise coordination with the production of Target graphics as outlined in AFOIN Memo, subject: "Target Intelligence from TALENT Materials and Its Dissemination Outside TALENT Control System (TCS)." Dissemination of air facilities sheets will be made outside the TALENT Control System and the sheets will normally be classified SECRET.
5. Authority is requested for AFOIN to produce and disseminate air facilities intelligence in accordance with the system outlined above.
6. The attached five inclosures are sample air facility sheets incorporating TALENT information which will be reproduced and distributed under this system.
